

Minimoog Model D factory mod made to most tempco style VCO boards.

Adds a delay line that improves tracking.

Requires replacement of 3 resistors with 15K and wiring of additional 3 resistors and 3 capacitors across R78, R106 & R128.

R69, R105 & R141 previously 6.8K. Change all to 15K

R78, R106 & R128 remain as 2K, but parallel 220 ohm and .01 capacitor
